Skills

- HTML
- CSS
- JavaScript
- C#
- Node.js
- Express
- React
- MongoDB
- GitHub

Projects

Basketball Score App
January 2020
- Integrated an open source API to fetch player, team and game data
- Implemented useRef, useState and useEffect for getting and rendering data
- Created functionality to sort, store and remove players from an array

Weather App
December 2020
- Integrated with OpenWeatherMap API and Google Places API
- Dynamic background image which changes according to the weather displayed of searched location
- Safely stored API keys in a Dotenv file

Top Kicks Website
November 2020
- Created a fully responsive mock website with a home, registration, login, account and 404 page using Node.js
- Applied user authentication, authorization and login or registration form validation
- Connected all user data to MongoDB

Tower Defence 3D - Enemy Wave
August 2020 - October 2020
- Programmed clean, modularized scripts with scriptable objects and object-orientated programming using C#
- Designed 20 levels, balanced complex tower and enemy stats and created a score system
- Implemented binary serialization to save and load data
